## PARASOLS | *bambusa*

Bambusa is one of the world's fastest growing timber substitutes. Traditional hardwoods can take decades to mature. In comparison, Bambusa achieves complete sustainability in three to four years, with a swift growth rate that increases CO2 absorption. Additionally, it provides sustainable income for some of the world's poorest peoples whilst revitalising indigenous ecosystems.

Breezefree's durable and high strength Bambusa parasols offer the following advantages:

- Round, square or rectangular sizes up to 13sqm (4m round)
- Fully Serviceable

Bambusa Standard is our most popular wooden parasol designed for the commercial and high-end domestic markets.

The double pulley and rope system ensures easy raising and lowering of the parasols even on the largest of models.

The covers are attached using bolt-down stainless steel rib end protector system or alternatively sewn pockets.

Bambusa Superior is similar to the Bambusa Standard, with the difference being a stainless steel underarm support which replaces the pivot bolt of the rib and rib support of the Standard.

Some of the component sizes have also been increased for improved strength and stability.

Polyester is a strong fibre that is resistant to creasing and keeps its shape well. The price is quite low in comparison to other umbrella cover materials with the only drawback being the colour fastness of the darker materials.

Our polyester is treated with a water repellent, which helps it keep clean and reduces mildew.
